Introduction

This document describes Estonian e-invoice and PEPPOL BIS 3 UBL e-invoice mapping. Both syntaxes are EN compliant.

The e-invoicing Europe Norm, described in EVS standard EVS-EN 16931-1:2017, has standardized data structures and business rules for international e-invoicing in Europe. All government agencies should accept e-invoices from November 27, 2018. PEPPOL BIS 3 UBL is one of the accepted syntaxes in Europe. An e-invoice issuer can create international invoices in Estonian format (v. 1.2.EN) and his e-invoicing operator must do transformation of the e-invoice to transmit it in internationally accepted format. The mapping document will help e-invoicing operator to build e-invoice transformation systems for transformation of Estonian e-invoices to PEPPOL e-invoices.

1. Scope

This technical specification specifies mapping between the PEPPOL BIS3 UBL syntax and the EE e-invoice 1.2.EN syntax.

2. Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the last edition of the referenced document (including any amendments) applies.

3. Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

Electronic invoice - Invoice that has been issued, transmitted and received in a structured electronic format which allows for its automatic and electronic processing.

[SOURCE Directive 2014/55/EU [i.1]]

3.2

Semantic data model - structured set of logically interrelated information elements.

3.3

Information element - semantic concept that can be defined independent of any particular representation in a syntax.

3.4

Syntax - machine-readable language or dialect used to represent the information elements contained in an electronic document (e.g. an electronic invoice).

3.5

Business term - label assigned to a given information element which is used as a primary reference.

3.6

Core invoice model - semantic data model of the Core elements of an electronic invoice.

3.7

Core elements of an electronic invoice - set of essential information elements that an electronic invoice may contain in order to enable cross-border interoperability, including the necessary information to ensure legal compliance.

3.8

Identifier - character string used to establish the identity of, and distinguish uniquely, one instance of an object within an identification scheme from all other objects within the same scheme.

Note 1 to entry: An identifier may be a word, number, letter, symbol, or any combination of those.

3.9

Identification scheme – collection of identifiers applicable for a given type of object governed under a common set of rules.

3.10

Invoice extension – set of elements for Estonian e-invoice which is intended to meet the requirements of the standard or user group.

4. PEPPOL UBL mapping to EE e-invoice

4.1. Introduction

The Estonian e-invoice is a national e-invoice standard developed by the group of organizations. In 2018 was developed Estonian e-invoice extension for international e-invoicing. The extension was developed by Tieto Estonia AS, Telema AS and Eesti Post AS co-financed by the Europe Union.

The Estonian e-invoice syntax is a xml-based format that is compatible with Europe Norm. The format has two parts - the core invoice and the EN extension. The first part is usable without the second, EN part, so called EN extension. EN part can be used for these business partners who must use EN invoices in according with the EU directive.

There is no special EE e-invoice extension to fulfill PEPPOL BIS3 requirements because PEPPOL BIS3 UBL syntax is EN compliant.

4.2. Identifier usage policy

Most of identifiers in the PEPPOL (and EN) e-invoice should have scheme identifier. Scheme identifier is a text value referring to the list from which the identifier value comes from. For example Estonian company registration numbers has scheme identifier 0191. Countries may have several registers providing identifiers, for example tax registration numbers or legal registration numbers. For that reason all registration numbers without scheme identifier are hard to handle in environment with multiple registers. Identifiers from different registers may overlap and in such cases there might be misunderstandings in automated data processing. For example the system can't use GLN for addressing if scheme identifier is not known.

The EE e-invoice standard doesn't use scheme identifiers. It means that identifier with a scheme identifier must be put to the extension of EE e-invoice to fulfill PEPPOL and EN requirements and for using them for composing an PEPPOL BIS3 e-invoice.

There are multiple identifiers that have mandatory scheme identifier in PEPPOL BIS3:

- 1) party electronic addresses;
- 2) standard item identification.

Version status: FINAL

All other schemeID elements are optional but in many cases there is no way to put identifiers from PEPPOL e-invoice to the Estonian e-invoice if they have no scheme identifiers. Scheme identifiers should be used always if the parties want to automate the e-invoicing process.

4.2.1. Party identifiers

Party identifiers must not be duplicated both to the Estonian EN extension and to the Estonian e-invoice core elements like RegNumber, VATRegNumber, GLN, TransactionPartnerCode and UniqueCode. GLN is the only value that may occur in element GLN and in PartyElectronic address at the same time.

EN e-invoice identifiers come from schemes registered in ISO/IEC 6523.

Table 2 – PEPPOL BIS3 UBL to EE e-invoice v1.2.EN elements mapping

For transforming a PEPPOL e-invoice to an Estonian e-invoice, the following rules should be followed:

- 1) The mapping in the table 1 in the opposite direction should be used.
- 2) Transmitting party identifiers, the transformation is not exactly in the opposite direction of the mapping in the table 1. For party identifiers the table below should be used.

Estonian e-invoice party identifiers	EN BT identifier	PEPPOL BIS 3 UBL element	Mapping rules
GLN , party identifier	BT-29, BT-46 and BT-60	cac:Party/EndpointID	Value should be added to the EE e-invoice as follows: 1) ...Party/GLN, if EN schemeID = '0088' ('GLN') and 2) ...Party/Extension/CustomContent/PartyEN/PartyElectronicAddress, if schemeID = '0088' ('GLN').
TransactionPartnerCode , party identifier	BT-29, BT-46 and BT-60	cac:Party/cac:PartyIdentification/cbc:ID	Should not be used in EN invoices.
UniqueCode , party identifier	BT-29, BT-46 and BT-60	cac:Party/cac:PartyIdentification/cbc:ID	Value should be added to the EE e-invoice as follows: 1) ... Party/UniqueCode is created from cbc:ID where no schemeID is provided. Only first instance of cbc:ID without schemeID is used.
RegNumber , party legal registration identifier	BT-30 and BT-48	cac:Party/cac:PartyLegalEntity/cbc:CompanyID	Value should be added to the EE e-invoice as follows: 1) ...Party/RegNumber; 2) Do not duplicate the identifier to the Extension.
VATRegNumber , party VAT identifier	BT-31 and BT-61	cac:Party/cac:PartyTaxScheme/cbc:CompanyID with cac:TaxScheme/cbc:ID = 'VAT'	Value should be added to EE the e-invoice as follows: 1) ...Party/VATRegNumber; 2) Do not duplicate the identifier to the Extension.
SellerTaxRegId , Sellers tax registration number	BT-32	cac:Party/cac:PartyTaxScheme/cbc:CompanyID with cac:TaxScheme/cbc:ID != 'VAT'	Value should be added to the EE e-invoice as follows: 1) SellerParty/Extension/CustomContent/PartyEN/SellerTaxRegId.
GLN or PartyId , Deliver to location identifier	BT-71	Invoice/cac:Delivery/cac:DeliveryLocation/cbc:ID	Value could be added to the EE e-invoice as follows: 1) if schemeID = '0088' ('GLN'), then to Invoice/InvoiceParties/DeliveryParty/GLN; 2) if schemeID is missing then to UniqueCode; 3) if schemeID != '0088' then to Invoice/InvoiceParties/DeliveryParty/Extension/CustomContent/PartyEN/PartyId.

4) Estonian e-invoice contains mandatory elements not represented on the (PEPPOL) UBL invoice. These elements should be filled as follows:

Estonian invoice	UBL – Invoice	UBL- Credit Note
Header/Date	Current date.	
Header/FileId	Unique file identifier generated by the operator. Identifier length must be up to 20 characters. Can be used number like the operator identifier with scheme id + '-' + sequential number over all invoices.

Footer	Must be filled as described in Estonian e-invoice description.	
Footer/TotalNumberInvoices	Number of invoices in the file. Count of Invoice elements in the file. Used for error detection.	
Footer/TotalAmount	Sum of PaymentTotalSum elements of all the invoices in the file. Different currencies are not taken into account. Used for error detection.	

- 5) Addition elements must be filled in both places – in extension AdditionEN and in Addition blocks.
- 6) All Estonian e-invoice mandatory elements not mapped in this document or mapped but not filled or missing in an invoice, should be filled with value 'Not Specified' (text elements) or '0' (numerical elements).

4.4. Differences between PEPPOL UBL Invoice and Credit Note

The table below shows element matches between UBL invoice and credit note. The Estonian e-invoice format (or syntax) contains only one document called invoice. There is no credit note. For transforming invoices to UBL or from UBL can be used mapping as in the following table:

UBL – Invoice	UBL – Credit Note
ubl:Invoice	ubl:CreditNote
cbc:InvoiceTypeCode	cbc:CreditNoteTypeCode
cac:InvoiceLine	cac:CreditNoteLine
cbc:InvoicedQuantity	cbc:CreditedQuantity

The order of the elements of Credit Note varies also. Please see the PEPPOL specification of Credit Note at <http://docs.peppol.eu/poacc/billing/3.0/syntax/ubl-creditnote/tree/>.
