

DigiDocService

Service/solution

DigiDocService is a one-stop shop for integrating your e-Service with different strong eID providers. DDS is available as a web service over the Internet to any e-service. A local partner is needed to support local languages.

If needed, the service is also available under a license agreement to independent trust service providers.

Benefits

DigiDocService provides a quick and easy way to raise the security of any web service to meet the highest demands. It makes it possible to do authentication based on strong authentication devices from different vendors and provides service providers with the opportunity to enter legal signatures on any created data within their service, which provides long-term validity and proof of action in courts across the EU.

Service is supported by free-of-charge end-user tools for signature creation and verification: DigiDoc client and DigiDoc portal.

References

DDS receives millions of queries per month and has had a growth rate of over 100% per year.

History, Facts and Future Development

DigiDocService was first introduced, based on customer demand, in 2005 to support usage of Estonian ID cards.

Since 2007, we have had mobile ID support integrated into the DDS platform.

Starting in November 2008, we have also supported external certificate providers, based on customer requests and a security audit of their services.
