

E-invoicing Operator Platform

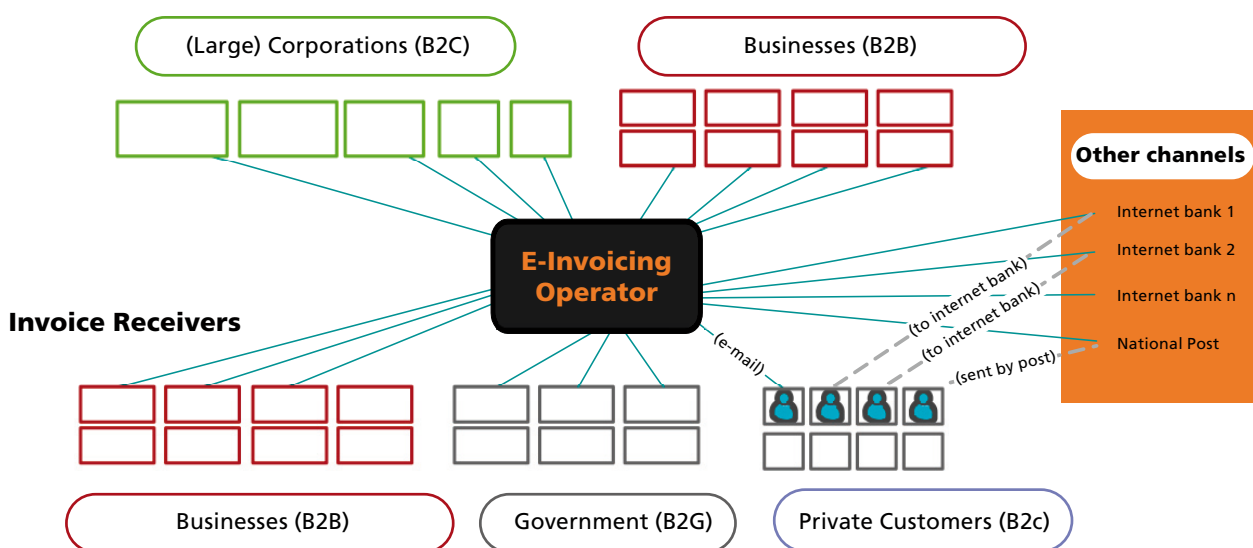

Service/solution

Estonian Post e-invoicing operator eArvekeskus has developed an e-invoicing platform which makes it possible to enter the paperless bookkeeping era.

The eArvekeskus e-invoicing operator platform supports B2C and B2B electronic invoicing and has the ability to integrate with various ERP solutions, including Microsoft Dynamics Axapta, Microsoft Dynamics Navision and SAP. Our solution covers full life cycle of an invoice, starting from its creation to electronic approval and automatic transfer to ERP and ending with electronic archiving.

The e-invoicing operator platform is sold as an “out of the box” solution packed with the related Business Knowledge and Business Model. For smooth set-up and reliable operation we offer various cooperation models (joint venture, etc).

Invoice Senders

Benefits

E-invoicing will increase operational efficiency both for invoice sender and receiver by literally connecting the sender’s Sales Ledger to the receiver’s Purchase Ledger.

The e-invoicing operator platform also provides solutions for organizations to manage all their incoming invoices (paper, PDF and e-invoices) electronically and send them, after electronic approval, to an accounting system and electronic archive.

References

Estonian E-invoicing operator eArvekeskus, through its platform, makes it possible to send e-invoices to the public administration and also offers B2G invoicing.

History, Facts and Future Development

- The Estonian Post e-invoicing operator eArvekeskus was launched in June 2009 to provide e-invoicing services for the local B2C and B2B market.
- It takes 5 minutes for companies to start sending e-invoices from the e-invoicing operator portal.
- Companies can start receiving e-invoices and using the electronic invoice approval process within an hour.

Technologies

The e-invoicing operator can use the platform to offer its services based on the SAAS (Software as a Service) business model.

The e-invoicing operator platform was developed using Java Enterprise Edition and runs on BEA WebLogic middleware and the Oracle database.

E-invoicing Operator Platform's entire infrastructure can be based on Virtual Cloud Computing.
