

GPS-based Tracking Solution

Service/solution

Eurosat Group LLC is the developer of SW for tracking and managing vehicles and vehicle systems (Track 24 and Track24 Inspect). The Track24 solution is IT-based and Track24Inspect is one of the first desktop-based tracking SW solutions in the world. We also offer full solutions with GPS controllers and digital fuel sensors.

Our partner in each country should adapt our service to its own market, and provide sales and top-level support. On our side, we will provide an SW platform and support for local accommodation, plus support for SW. The SW platform is available in the local language. After a test period, the partner can use its own server in its country and we will install our platform into the partner's server. For full solutions, EG will send HW products to resellers for test periods/pilot projects.

Benefits

The profit from the service: it will offer to the end-user a 25% savings on managing costs and 5% on fuel costs. Comprehensiveness, savings and transparency are offered.

References

The company has over 200 business clients. The EG is very involved in the heavy machinery area (road building and maintenance, construction, big trucks, tour buses, building and mining). Some of our VIP customers are: the biggest building company in Scandinavia Skanska, famous wood-processing company Stora Enso, Estonian Roadadministration, Estonian Energy, Estonian Rescue Administration, port of Riga.

History, Facts and Future Development

The basic development process started in 2005. The company founded the first middleware database system. Public Internet service started in 2007, and we offered the desktop version Inspect2 to at least 100 vehicle companies at the beginning of 2008. In future, most of our services will run in the MS Silverlight environment.

Technologies

Microsoft .NET and Microsoft SQL Server, Microsoft Silverlight

Budget and Price

The full package (SW and HW) can be installed in one and a half to two months at a price between 5000–90,000 EUR (depending on the number of vehicles and the selected SW solutions).

Partners and software development experience

In 2003–2009, we worked with own developers (programmers), and at the end of 2009 we started cooperation with Web Media. This cooperation will make available to us quick and high-quality integration of Track24 and Ttrack24 Inspect.
