

# Mobile-ID

## Service/solution

Wireless PKI, which is based on standardized SIM application and has little or no special requirements for the phone.

Mobile-ID has been implemented in two different countries. Service can be offered to a wide variety of mobile operators around the world.

We are able to provide both full service to the mobile operator and provide the technology and know-how for separate setup.

## Benefits

The mobile phone will act as a secure signing device.

## References

EMT Mobile-ID won the title “Best New Product 2007” in a survey conducted by Innovation Center InnoEurope. Those who voted for Mobile-ID called it a fast, flexible and innovative solution.

Mobile-ID service will add to the value that the mobile operator is able to provide to the end-user. In addition, it adds an innovative quality to the image of the provider of such service.

## History, Facts and Future Development

Operating since 2007, with EMT and Omnitel. Since 2009, Tele2 and Elisa have offered the same service.

Three different SIM applications are used and all of them are able to work in the same ecosystem.

## Technologies

SIM ToolKit application, Smarttrust and C

## Budget and Price

Project price ~2 million EUR.
